

Vivek Kumar

Senior Frontend Engineer

Email: vk9633698@gmail.com | Phone: +91 7739346305 | Location: Gurugram, India
LinkedIn: linkedin.com/in/vivek-kumar-sinha97 | GitHub: github.com/sinha97 | Open to Remote

Skills

Frontend: React.js, TypeScript, Next.js (SSR, SSG, App Router), JavaScript (ES6+), Node.js, React Native
Architecture & State: Micro-Frontends, Module Federation, Redux Toolkit (RTK Query), TanStack Query (React Query), Context API, Design Systems, Component Libraries, Code Splitting, Lazy Loading
Data & APIs: GraphQL, Apollo Client, REST APIs, WebSockets, Redis, JSON, MongoDB, SQL
Testing & Quality: Jest, React Testing Library (RTL), Playwright, TDD, Code Review, GitLab CI/CD
Performance: Core Web Vitals, Lighthouse, Webpack, Vite, Babel, Memoization, Tree-Shaking, Bundle Analysis, Profiling
Accessibility: WCAG 2.1 AA, ARIA, Keyboard Navigation, Focus Management, Screen Reader Compatibility
Other: Dynamic Theming, Internationalisation (i18n), Git, Postman, Agile/Scrum

Education

Bachelor of Engineering – Computer Science 2015 – 2019
Panjab University, Chandigarh, India

Experience

Senior Frontend Engineer March 2026 – Present
Accenture, Gurugram, India

- Delivered enterprise-scale React and Next.js features for a Fortune 500 client engagement using component architecture best practices and WCAG 2.1 AA standards, keeping production code accessible and performant.
- Implemented Module Federation micro-frontend architecture across an enterprise application, enabling independent team deployments and reducing cross-team release dependencies.
- Established TypeScript coding standards and reusable component patterns while mentoring junior engineers, improving frontend consistency and CI/CD pipeline integration.

Senior Frontend Engineer August 2024 – February 2026
Satin CreditCare Network, Gurugram, India

- Diagnosed bundle bloat through Webpack analysis and applied code-splitting, lazy loading, and memoization, cutting page-load time 40x across core financial-servicing modules.
- Designed a real-time analytics dashboard using Redux Toolkit and TanStack Query with client-side caching and optimistic updates, reducing API over-fetching by 60% while keeping the UI responsive on 2G networks.
- Built a shared UI component library (forms, tables, modals, dropdowns) adopted across 4 product squads, compressing feature-release cycles by 25–30% and removing roughly 8,000 lines of duplicated code.
- Architected an event-driven system for NBFC training workflows, streamlining coordination across distributed customer success teams.
- Built a statutory gratuity-calculation module for 12,000+ employee records with automated payout workflows, cutting HR processing time by 65%.
- Rebuilt a 12-step legacy onboarding flow into a validation-driven React wizard, cutting completion time by 50% and support tickets by 70%.
- Delivered WCAG 2.1 AA accessibility (ARIA, keyboard navigation, focus management) across 15+ core modules and reached 78% test coverage using Jest, RTL, and Playwright.

- Shipped React Native modules with dynamic theming and i18n across 3 languages and 6 device form-factors, expanding the product's addressable market.
- Led daily stand-ups, sprint planning, and code reviews with PM, UX, and backend/QA across 8 consecutive sprints with zero scope-creep escalations.

Frontend Developer

April 2023 – July 2024

Kai-T, Gurugram, India

- Designed a Module Federation micro-frontend framework enabling 3 independent teams to deploy in parallel, cutting release contention by 70% and compressing time-to-production from days to hours.
- Led a 40,000+ line JavaScript-to-TypeScript migration, cutting runtime type errors by 80% and reducing new-engineer onboarding from 2 weeks to 4 days.
- Profiled performance bottlenecks with Lighthouse and React DevTools and applied code-splitting and memoization, lifting Lighthouse scores from the mid-60s to 90+ across 3 product areas.
- Built GitLab CI/CD pipelines with automated test gates, cutting release turnaround from 3+ days to under 2 hours and eliminating manual deployment errors.
- Authored shared utility and component libraries used by 2 product teams and led code reviews, saving 4–6 engineering hours per sprint.

Associate Software Developer

July 2021 – January 2023

OpenSense Labs, New Delhi, India

- Built a zero-dependency Vanilla JavaScript module rendering target websites inside a sandboxed iframe with real-time DOM injection and an embedded Monaco Editor, cutting campaign turnaround by 60%.
- Delivered a React-based drag-and-drop page builder letting content teams publish pages without engineering support, removing a 3-day developer bottleneck per content cycle.
- Built 6 configurable analytics dashboards using Recharts and Chart.js adopted by 3 business units, reducing analyst-to-insight time by 50%.
- Refactored fragmented UI into reusable component layers, cutting code duplication by 35%, and mentored 2 junior developers who were both promoted to mid-level within 12 months.

Software Developer

September 2020 – March 2021

Arnova Pvt Ltd, New Delhi, India

- Resolved memory leaks and re-render loops in 4 chart-heavy dashboard components, eliminating frame-drop incidents over 3 months.
- Decomposed an 8,000-line monolithic UI into 14 feature-scoped components, enabling independent testing and parallel development.

Frontend Developer

April 2020 – August 2020

Beeu Tech, Kolkata, India

- Built responsive, cross-browser UI flows for a customer-facing fintech application using A/B testing and iterative feedback loops to improve form-completion rates.
